"It is a set or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bc1-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LSPEVFQHIWDFLEQPICSVQPIDLNFVDEPSEDGATNKIEISMDCIRMQDSDLSD-PMW

"Isolation of CDNAs encoding the p53 tumor suppressor gene in the
"Isolation of CDNAs encoding the p53 tumor suppressor gene in the
Japanese Medaka (Orylas latipes).";

Submitted (MAX-1997) to the EMBL/GenBank/DDBJ databases.

-I FUNCTION: Acts as a tumor suppressor in many tumor types;

growth arrest or apoptosis depending on the physiological
circumstances and cell type. Involved in cell cycle regulation as
a trans-activator that acts to negatively regulate cell division
by controlling a set of genes regulared for this process. One of
the activated genes is an inhibitor of cyclin dependent kinases.

Apoptosis induction seems to be mediated either by stimulation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TISSUE-Liver;

Submitted (APR-1997) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling as est of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of BcI-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SFVPSQKTYPGNYGFRLGFLQSGTAKSVTCTYSPSLNKLFCQLAKTCPVQLWVDSPPPP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     71 OYTNLGLLNSMDQQIQNGSSSTSPYNTDHAQNSVTAPSPYAQPSSTFDALSPSPA----

The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour withch demonstrate certain sequence identity to known tumour campination is conserved between p73 and p53, and from faron-exon organisation is conserved between p73 and p53, and from known exon and intron staces for these 2 genes, it was possible to identify new members of this gene family using a PCR-based strategy of amplifying 2 exons in a conserved domain and their interventing intron. The human p53 gene was localised to chromosomal position intron. The human p53 gene was localised to chromosomal position of gamma forms, while p63 members differing in the N-terminus are designated as deltaN and TA forms, where the deltaN form lacks the transactivation domain. The present sequence represents human gong a clitan and mouse tissue. It demonstrates remarkably divergent post into human and mouse tissue. It demonstrate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression may play a critical role in the process of cervical squamous differentiation, both benign and neoplastic. DeltaN isotopes of p63 act as dominant negatives towards transactivation by p53 and p63.

Cachexia) and neuronal differentiation and related degenerative disorders. p63 may also be implicated in haematopolesis, muscle wasting (e.g. cachexia) and neuronal differentiation and related degenerative disorders. p63 molyapetides (see AAVS8512-83) and anti-p63 antibodies of the invention can be used to identify compounds useful for treating disorders involving such transgenic animals. New isolated p63 cell regulatory protein for, e.g. treatment of Claim 23; Fig 12; 161pp; English.

WPI; 2002-698710/75. N-PSDB; ABS73332 Treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins, e.g. cell proliferative diseases, involves administering an inhibitor of heat shock protein 90

Disclosure; Page 346-348; 389pp; English.

The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I). treating annecrous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein or cellular protein isoforms (II) dependent on heat shock involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding concepenic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. protein isoform in a patient heterozygous for (II). The method is useful to treating a disease e.g. hemmatopoletic discrder such as T or B cell ymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, or a disease characterised by a solid tumour such as papillary thyroid surfaming and any serial sarcoma. The method is also useful for treating viral infections. This is the amino acid sequence of a human oncogenic protein.

The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous cell population, treating proliferative diseases associated with mutant cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein or cellular protein isoforms (II) dependent on heat shock protein furbly treating cells expressing (II) involving administering HSPO-101/Lto. The method is useful for creating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein or cellular protein isoform in a patient heteroxygous for (II). The method is useful protein isoform in a patient heteroxygous for (II). The method is useful isoform disease e.g. hemmatopoietic disorder such as Tor B cell ymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, I ymphoma, chronic myeloid leukaemia (CML), ALL, ALL, ALL, ALL, and CMML, I will and sease of the protein contained the sease of the method is useful the sease of the method (CML), ALL, ALL, ALL, ALL, and CML, and CML,

                        This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polyucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qγ
                                                              The present invention describes isolated human lung carcinoma polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by cobtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the amount of polynucleotide that hybridises to the oligonucleotide and coligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer. ABQ92145 to ABB02145 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes human lung tumour proteins. Human lung activaties, and polynucleotides have cytostatic and immunostimulant activaties, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating ing cancer or stimulating an immune response. ABL88959 to ABL8930 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

                                                                                                                   480
                                                                                                                                             540
                                                                                                                                                         The invention provides isolated human lung tumor nucleic acids and polypeptides. The polypeptides can be used for the treatment of lung cancer. The polypeptides and polynucleotides can be used to stimulate T cells or antigen presenting cells for use in the treatment of lung cancer. The polypeptides and monoclonal antibodies specific for the polypeptides and monoclonal inthe the development of lung cancer. Agents which bind the polypeptides can be used for detecting lung cancer and for monitoring the progression of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated lung tumor polynucleotides, used to develop products for
the treatment, prevention and monitoring the progression of lung cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SPDDELLYLPVRGRETYEMLLKIKESLELMÖYLPQHTIETYRQQQQQQHQHLLQKQTSIQ 360
                                                                                                          This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting calls expressing P2 and then administered to the patient to inhibit

The present invention describes isolated human lung carcinoma polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the amount of polynucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in presence of a cancer in the patient. (I) and (II) are useful in a pharmaceutical compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240

Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or

The present sequence represents a human p51 protein, which is related to p53 and has cell proliferation regulation and tumour suppression activity. The p51 gene can be used in the investigation, diagnosis and treatment of diseases such as concer, with which the p53 family cell proliferation regulation is associated. The p51 protein may be used for screening potential agonists and antagonists of its regulatory function,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 investigation and proliferation

                                                                                                                                                                                                                                                                      The present invention concerns the discovery of a new family of cell regulatory proteins (CRPB) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour suppressor proteins p53 and p73. Mouse p63 cDNA was isolated using CC suppressor proteins p53 and p73. Mouse p63 cDNA was isolated using cC amplified CDNA possessed a truncated N-terminus, i.e. the transactivation domain was absent. Additional splice variants were identified by screening a cDNA library with a probe corresponding to exons 5-9 of p63. At least 6 different isotypes exist. Splice to and gamma forms, while p63 embers differing in the N-terminus are corresponding at the C-terminus are designated as deltan and TA forms, where the deltan form lacks the castignated as deltan and TA forms, where the deltan form lacks the corresponding. The present sequence represents mouse p63 isotype mu-deltany63 alpha. p63 was detected in a variety of cisotype mu-deltany63 alpha. p63 was detected in a variety of activities, such as the ability to transactivate p53 reporter genes condinduce apoptosis. Cessation or down-regulation of p63 expression differentiation, both benign and necoplastic. Deltan isotopes of p63 cact as dominant negatives towards transactivation by p53 and p63. CC act as dominant negatives towards transactivation by p53 and p63. CC act as dominant negatives towards transactivation by p53 and p63. CC cachexia) and neuronal differentiation and related degenerative cachexia) and neuronal differentiation and related degenerative condexia) and neuronal differentiation and in the production of processes, in detection and diagnosis, and in the production of transgentc animals.

victor wence certain sequence identity to known tunnour suppressor proteins p53 and p73. It has been observed that the intron-exon organisation is conserved between p73 and p53, and from known exon and intron islaes for these 2 genes, it was possible to chromosomal position of amplifying 2 exons in a conserved domain and their intervening intron. The human p53 gene was localised to chromosomal position of affering at the C-terminus have been designated as alpha, beta and differing at the C-terminus have been designated as alpha, beta and gamma forms, while p63 members differing in the N-terminus are cessionated as delitan and A forms, where the deltan form lacks the transactivation domain. The present sequence represents human and mouse tissue. It demonstrates remarkably divergent activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 and p63.

Cc act as dominant negatives towards transactivation by p53 and p63.

Cc act as dominant negatives towards transactivation by p53 and p63.

Cc achexia) and neuronal differentiation and related degenerative disorders. p63 polypeptides (see AAY05953-64), polynucleotides (see AAX05972-83) and anti-p63 antibodies of the invention can be used to consider the production of processes, in detection and diagnosis, and in the production of transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a chimera gene of p53 family encoding a transcription activating region, a DNA binding region, and an oligomer formation region of different p53 family proteins. The chimeric gene can be used for gene therapy of p53 variant human tumours, and analysis of the function of the p53 family gene. The present sequence was used in the

proteins (1), treating cancerous cells containing (1) in a heterogeneous cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (11) dependent on heat shock protein (HSP)-90, or selectively treating cells expressing (11) involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (c.g. Theumatof at their social associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. p53), or selectively treating cells expressing mutant protein or cellular protein isoform in a patient heterosyous for (II). The method is useful (for treating a disease e.g. haematopoietic disorder such as T or B cell lymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, CC or a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewing's sarcoma, inposarcoma, rhabdomyosarcoma and synovial sarcoma. The method is also useful for treating viral The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous Disclosure; Page 352-354; 389pp; English.
